

## Publication Citation Format and Examples

The citation information should be inclusive enough to allow the article to be found or requested through a library.

Citation information should be sight-verified for complete accuracy before the record is approved. Some common problem areas include:

Author Names – Last name first, no space between author initials, and no “and” before last author

Spacing – There is only one space between elements of the citation

Capitalization – Capitalize proper names in the article title, or the second capital in names such as McMichael. For book titles, capitalize all important words.

Abstract – Insert the word “abstract” in brackets as the last word in the article title if the citation is for an abstract only.

Punctuation – Use the comma or period as shown in the specific format. Be sure to use a period after the journal title, before the volume information. End each citation with a period.

Abbreviations – Do not abbreviate journal titles unless that is what the journal uses for title (e.g., Transactions of the ASAE). Do not abbreviate meeting information. It is acceptable to use Paper No. Use p. (not pp.) to indicate pages.

Pagination – Include complete page numbers (e.g., use 241-252, not 241-52)

Meeting Information – Include as much information as possible, to help differentiate one meeting from another and to help in locating the publication in a library: meeting date and place, editor/compiler if identified, meeting title. In some cases, it may be necessary to include the name of the sponsoring/publishing organization.

Records for Same Meeting – Use a consistent format for all records presented at the same meeting or published in the same source.

Remember that ARIS is not capable of using subscript, superscripts, italic, or underline.

### Journal Article:

#### *Format:*

Author last name(s) and initial(s). Year of publication. Article title. Full journal title.

Volume(issue):page numbers. (Use issue number if available; issue number should always be used if each issue within the volume restarts page numbering with 1.)

#### *Examples:*
